AB The invention relates to a luminescent element characterized by having a layer contg. a metal coordination compd. which has a partial structure ML_m represented by the following general formula I (A, B = isoquinolyl group residue; M = metal) and which as a whole is preferably represented by the following formula ML_mL'_n (M = Ir, Pt, Rh, Pd; m = 1, 2, 3; n = 0, 1, 2; ML_m = compd. I; ML'_n = compd. II-IV; A', B', B'' = ring group residue; E, G = C1-20 alkyl; J = H, C1-20 alkyl). The luminescence element shows the high luminescent efficiency and the good stability.

AB The invention relates to a luminescent element having a cathode, an anode, and one or a plurality of layers of org. thin films which is arranged between them, characterized in that at least one of the layers is a light emitting layer which comprises a luminescent mol. of a metal coordination compd. having a basic structure represented by the following general formula I (A, B = ring group residue; M = IR, Pt, Rh, Pd) and having a substituent on at least one of cyclic groups A and B as a guest in a host material at an concn. which is 8 wt. % or greater and is greater than a concn. at which a luminescent mol. of a compd. having a structure analogous to the above and free of the substituent exhibits the max. luminous efficiency. The luminescent element is less susceptible to extinction by concn. even when used at a high concn. in a host material and thus exhibits high efficiency.

AB The invention refers to an org. electroluminescent device comprising an emitting material and a dopant for improving dispersion in the emitting layer, wherein the dopant can be a combination of an emitting compd. and a non-emitting compd., or can be a current promoting material. When the dopant contains an emitting compd., the emission wavelength of the dopant is similar to that of the main emitting material. The emitting material and the dopant are placed in the evapn. boat together for improved dispersion of the emitting material, improved emission efficiency and long life.
